

F 9FB GT & ST & Gen MSD/BOP EPE Supplier List/
Liste des Fournisseurs /Lista de Proveedores
3Q07 Supplier List
PROPRIETARY INFORMATION/INFORMATION
CONFIDENTIELLE

The below listing identifies prime suppliers for Power Plant Engineering (PPE), Accessory Systems Engineering (ASE) & Controls Electrical Systems Engineering (CESE) designed components (Energy Products USA) . It may not list all the prime suppliers licensees or manufacturing arrangements to produce their design. GE may utilize the prime suppliers or their licensees, partners and manufacturing associates interchangeably. GE does require the same level of quality from these suppliers and does qualify, support and monitor these suppliers with the same level of intensity as the suppliers listed below.

All major equipment suppliers listed have the capability to design and manufacture the equipment as defined for the purpose for which it is to be used. These suppliers have previously designed/manufactured functionally equivalent power plant equipment which is similar or equal in capacity and performance for components listed below. Note; Suppliers with "m" suffix indicates that they are multinational and manufacturing and design may be done in whole or part by their licensees, partners and or manufacturing associates.

This listing applies to primary suppliers and does not include second tier suppliers, i.e., suppliers of components or sub systems to these prime suppliers. While GE Power Systems does qualify and maintain surveillance on key critical sub suppliers we do not list nor control them to the same level as prime suppliers. Our qualification process of prime suppliers requires that they provide the same level of diligence and surveillance. Our prime suppliers are in a better position to determine what supplier's designs and products work better for their components and systems. This listing is not flowed down to our prime suppliers. For example, a supplier of piping systems is not required to use a supplier listed in the valves section.

Some descriptions below reference a gas or steam turbine model list indicator, i.e., " ml AO 76" for MSD and SINS designators for BOP items, as a help in identifying the component.

This is anon- controlled document. It has been created to support the ITO team proposals when customers request potential supplier information. These suppliers may or may not be utilized on future projects. Contact Otto Zamek 518-385-8436 for latest revision.

This document may also be viewed at http://supportcentral.ge.com/superfacilitator/sup_super_community.asp?sc_id=36912

La liste ci-dessous identifie les fournisseurs de premier rang pour les composants de design pour PPE (Power Plant Engineering - Études Centrales), Études Auxiliaires (PE Auxiliaires) et Études Régulations et Systèmes électriques (PE Régulation). Les licenciés de ces fournisseurs de premier rang ou les partenaires industriels pour la fabrication de ces composants ne feront pas tous partie de cette liste. GE peut faire appel de manière interchangeable aux fournisseurs de premier rang, à leurs licenciés, partenaires et associés industriels. GE exige la même qualité pour tous ces fournisseurs, procède à la qualification, assiste et suit ces fournisseurs aussi rigoureusement que ceux de la liste ci-dessous.

Tous les fournisseurs des principaux équipements ont la capacité de concevoir et de fabriquer le matériel défini pour couvrir les besoins identifiés. Ces fournisseurs ont déjà conçu / fabriqué des équipements de centrales, fonctionnellement équivalents et qui sont similaires ou égaux en performance à ces composants répertoriés ci-dessous. Nota bene : le libellé « m » qui suit le nom de certains fournisseurs indique qu'ils sont multinationaux et que la fabrication et la conception peuvent être faites complètement ou en partie par leurs licenciés, partenaires et/ou leurs associés industriels.

La liste s'applique aux fournisseurs de premier rang et n'inclut pas les fournisseurs de rang inférieur, c'est-à-dire, les fournisseurs des composants ou des sous-systèmes de ces fournisseurs de premier rang. GE Power Systems assure toutefois la qualification et suit de manière constante les fournisseurs-clés de rang inférieur, mais n'assure pas un contrôle aussi sévère que pour les fournisseurs de premier rang. La procédure de qualification des fournisseurs de premier rang exige de la part de GE le même niveau de supervision et d'attention. Les fournisseurs de premier rang sont plus à même de déterminer quels sont les designs et produits qui sont le plus appropriés pour le fonctionnement de leurs composants ou systèmes. Cette liste n'est pas imposée à nos fournisseurs, c'est-à-dire, par exemple, qu'un fournisseur de systèmes de tuyauteries n'est pas contraint de faire appel à un fournisseur de vannes de cette liste s'il doit se fournir en vannes.

Certains items font référence à des codes liés aux turbines à gaz ou à vapeur, comme par exemple « ML AO76 » pour les MSD ou à des numéros SINS pour le BOP. Ces codes permettent d'identifier les composants.

Ce document ne fait pas l'objet d'un suivi contrôlé. Il a été créé pour aider ITO à compléter les offres quand les Clients requièrent des informations sur les fournisseurs potentiels. Ces fournisseurs ne sont pas obligatoirement utilisés pour les projets futurs. Merci de contacter Otto Zamek au +1 518 385 8436 pour la dernière révision ou cliquez sur le lien suivant : http://supportcentral.ge.com/superfacilitator/sup_super_community.asp?sc_id=36912
